LEGAL STUFF

This book may be distributed free of charge, provided it is not altered in any way. You may not copy, in part, or in whole, any portion of this book.

Nothing in this book should be misinterpreted as medical advice. You agree and understand, by reading past this point, that this book is intended as informational only. If you are ill, or have any uncertainty about any nutritional supplement you should check with a medical professional who is familiar with your case. The products discussed are not regulated by the FDA because they are nutritional supplements, and not drugs. They are not intended to cure, mitigate or treat any disease. The opinions herein are the opinions of the author, and not necessarily those of any company that sells, manufactures or distributes these products. Shelley Penney is an independent representative for companies which distribute high quality, affordable wellness products and nutritional supplements.

There may be testimonials included in this version of Book. Testimonials are personal stories related as is, by the person telling the story. They are not necessarily an indication of what would happen to you or anyone you love. Everyone is different. Sometimes people get better, and sometimes their personal health situation is such that they don't. These testimonials are shared with you as anecdotal only, and have not been "verified by science".

Book revision May 2011

Introduction

Some people call it "alternative" treatment, "natural" therapy, or just plain "quack" medicine. The medical and pharmaceutical realm would call it "unproven" due to the lack of double-blind studies done in clinical research centers. However, we maintain that just because something is "unproven" does not mean that it has been "disproven." If an alternative **works**, is **inexpensive** to manufacture, has **little or no side effects**, is **natural**, and is **not patentable**, then it is likely going to STAY unproven by traditional science, medicine, and drug companies, because no one wants to spend money to prove effectiveness of something they can't recoup their investment on.

Disease is big business. Most research dollars are invested in drugs that help you feel better for a while, treating "symptoms" while keeping you sick by not addressing the core problem, or creating a new set of symptoms. Natural products are not guaranteed to cure anything. Neither is drug therapy or any traditional means of "helping" you get better for that matter. We present this book for informational purposes only. We always recommend that you speak with your physician, or someone who is qualified to give you medical advice, and knows your very unique health situation. The products mentioned are supplements, and this is why they are not regulated by the FDA. The FDA only regulates drugs, and only drugs regulated by the FDA are allowed to make claims. THAT is why you always see a disclaimer on nutritional products.

Using alternatives, or adjuncts to traditional medicine are not holistic. You often must apply many different approaches consistently. For example, the Original Zeolite will help remove the metals and toxins in your system, but you may want to add a potent Agaricus Blazei product to set your Natural Killer cells into action and kick start your immune system to start attacking foreign cells. You may want to add a whole food, potent liquid nutritional product for easily absorbed vitamins, minerals and anti-oxidants to further enhance your body's fighting engine. You may want to attack pain and inflammation with a Healthy Aging product. You may want to cleanse, and detox with soothing and powerful herbal teas, and to keep your intestines healthy, and blood sugars under control with fiber and plant sterols. If you have cancer you will definitely want to get some Essiac Tea. (www.shelleypenney.com/shop) Many different tools used to chip away at disease can increase the likelihood of wellness. I wish you joy and peace on your journey back to health.

Many Blessings,
Shelley Penney

About The Author

Shelley Penney is a registered nurse by profession. She started her nursing career working in an active treatment psychiatric facility (back when there still was such a thing). She then transferred to a small military community, and worked in the last military/civilian mixed hospital in Canada. Her nursing career took her from medical-surgical nursing, to the emergency room, and over to the administrative side where she also did hospital supervision. The bulk of her career was spent in an active critical care unit. After many years of tending heart attack, and trauma victims, her final 2 years in the hospital were spent as Resource Nurse in a new, very busy Day Surgery Post Anesthetic Recovery Unit.

By the time Shelley was in her early thirties she was ready for a change. Raising 2 small children, and working shift work in an emotionally and physically demanding job was pushing her towards the brink of burn out. She started a home business in an area as far away from nursing as she could, and that was cosmetics. For 8 years, Shelley successfully marketed lipstick and skin care, and quickly worked herself into a leadership role. Her efforts earned her many free career cars, and a very comfortable living, raising her children. Then a devastating personal health crisis changed her focus. Once Shelley recovered from her own health issue, she decided to move back towards her original life purpose of helping people make a difference in their health and their lives, while at the same time improving her own health. However, after tasting the independence and financial freedom of entrepreneurship, nursing was out of the question. Now Shelley recommends quality products that impact the health and wellness of people around the world, and ALSO find others who want to spread the word, and create their own world of wealth and wellness.

We need help spreading the word. Contact Shelley when you are ready to make a change in your personal health, or your financial health. **Independent distributorships are available in many areas of the world.**

What is Zeolite?

Zeolite is a mineral with a unique interconnecting lattice structure. This lattice structure is arranged to form a honeycomb framework of consistent diameter interconnecting channels and pores. Negatively charged alumina and neutrally charged silica tetrahedral building blocks are stacked to produce the open three-dimensional honeycomb framework. Zeolites actually attract odors & gases and trap them in its crystalline structure. Zeolites also attract positively charged ions, because the zeolite maintains a negative 2 charge.

OK so to put that into 'regular people' words.... zeolite minerals form to resemble tiny little honeycombs. They have a negative charge of (minus) 2 and therefore attract particles with a positive charge, kind of like a magnet. There are many different KINDS of zeolite. This is important to remember as you read about zeolite on the internet, or in literature. Some people have reported that zeolite causes cancer.

Mesothelioma (a rare type of lung cancer) incidence is high in certain villages on the Anatolian plateau in Turkey, where environmental exposure includes **erionite**, a form of zeolite fibers, from the local volcano. A prospective study of residents of two exposed and one nearby control village was initiated in 1979 and continued through December 31, 2003. A total of 891 men and women, aged 20 years or older, were included, 230 of them residing in the village without known exposure to erionite. During the 23-year follow-up, 372 deaths occurred; 119 of these were from mesothelioma, which was the cause of 44% of all deaths in the exposed villages. Seventeen patients had peritoneal mesothelioma; the rest had pleural mesothelioma. Only two cases of mesothelioma, one of each type, occurred in the control village-both in women born elsewhere. Our results emphasize the severity of the mesothelioma endemic in erionite -exposed areas of Turkey and call for intensified prevention of mesothelioma by limiting environmental exposures to these zeolite fibers.

The zeolite used in The Original Liquid Zeolite does not cause cancer.

There are many many different types of zeolite. Zeolite has over 50 different natural species, and over 100 synthetic kinds. The

type of zeolite thought to cause cancer, called **erionite**, in this village in Turkey is not the same as **clinoptilolite** which is used in The Original Liquid Zeolite. Also, these people are exposed to the zeolite daily, in their environment, and breathe it into their lungs in every breath of air they take in. If you inhaled orange juice into your lungs every day, do you think you would get sick?? Of course you would, but when you drink it, it is actually very good for you. **The Original Liquid Zeolite** has been on the market now for over 6 years, and millions of bottles have been sold.

Liquid Zeolite

The zeolite is **not** turned into a liquid to make liquid zeolite. There isn't any way to "liquefy" this solid zeolite crystal. There is a report out there written by the "powdered zeolite" people that claims "when you liquefy a zeolite you get a pool of elements! You could really just stop reading right there because you can't liquify a zeolite. The people who claim to be zeolite experts really believe that "liquid zeolite is actually zeolite liquefied?" You would think that the experts would know, the name "liquid zeolite" only developed as a way to differentiate it from powdered zeolite. The particles are micronized (made very small) and suspended (caused to float) in a liquid, thus the name "Liquid and Zeolite" might be more appropriate.

I repeat... you can not 'liquefy' zeolite. Liquid zeolite is made up of tiny particles of CLEANED zeolite suspended in pure water.

Liquid zeolite, How Is It Processed?

The type of zeolite used in the Original Liquid Zeolite is called **clinoptilolite**. Clinoptilolite is just one of the over 50 kinds of naturally occurring zeolite. It is in the ground, and is mined. Because it is in the ground **it already has toxins in it**. Clinoptilolite could have mercury, lead, arsenic and other heavy metals in it as well as aluminum, herbicides, pesticides and anything else that is in the air, rain water or in the ground. This **MUST** be cleaned out before you take it into your body. I'll share more

about the cleaning process later, but for now remember, when zeolite comes out of the ground it is contaminated, because of its negative charge, and any contaminants in the ground that wash over it are likely in the zeolite cage.

The zeolite molecule is nearly impossible to destroy. Heat, up to 900 degrees Fahrenheit will not crack the molecule and it can be frozen in solution and defrosted without any change in activity. It also can not be destroyed by stomach acid, which is one of the most powerful acids known.

We activate the zeolite in a very weak, natural acid under high temperature conditions. This does not break the zeolite down; it simply forces the toxins that are stored in the zeolite cage to move out.

Without this process, **other** zeolite products **must contain toxins and heavy metals** as part of the zeolite cage. Additionally, without a heat process or some preservative, they contain bacterial and fungal contamination.

What Does Zeolite Do?

When you take the Original Liquid Zeolite product, it is not empty and ready to soak up metals and toxins from your body. Zeolite has a slight negative charge, and it attracts the opposite charged molecules (like a weak magnet) and then pulls the toxins deep in to its honeycomb-like cage. It does not remove things like potassium and magnesium and calcium, like oral chelation prescribed medications do. This is because those molecules are simply too big to get into the zeolite cage, so even if it attracted those molecules it would not be able to absorb them, thus it maintains its negative charge and continues to attract those bad molecules that are small enough to fit in to the cages. So you ingest the zeolite particles, they enter your blood stream, and are excreted mostly in the urine, and on the way they grab the poisons in your body that shouldn't be there.

The actual Clinoptilolite Zeolite molecule is shaped like a honey-comb and carries a natural negative (-) charge. When this type of Zeolite is ingested into the body all of the positively charged (+) heavy metals, toxins, and harmful chemicals bond with the zeolite and are flushed out through the urine within 6-8 hours.

Top Five Zeolite Benefits:

1. 100% safe and non-toxic: Clinoptilolite Zeolite is a natural mineral that is non-toxic. All traces of the mineral are completely eliminated out of the body within 6 to 8 hours. The Liquid form contains purified water and the mineral. Nothing Else! It's safe for children, pets, pregnant women and nursing mothers. It is also safe to take with most medications, but as always you should check with a medical professional first.
2. You could begin to feel better: There is clear evidence that liquid zeolite removes toxins. (75% or more of illnesses may be toxin-related). This does not mean that liquid zeolite is a disease treatment, it could be a useful supplement to integrate into a treatment program.
3. Removes heavy metals: Liquid zeolite has the perfect molecular structure for capturing and removing heavy metals from the body without removing healthy ions and minerals. Many people report feeling increased energy, clarity and vitality after removing heavy metal build-up.
4. Helps buffer body pH levels to a healthy alkalinity: Whenever zeolite is introduced to the body, it buffers the system towards slightly alkaline (pH 7.35 to 7.45), which is a perfect buffer for the optimum pH for the human body that we want. Liquid zeolite attracts and then buffers excess protons which cause acidity and in this way can help many conditions from acid reflux to Candida and arthritis.
5. Zeolite is very easy to take: Most detoxification products are difficult to take, many must be injected into the blood or administered such as an enema. Zeolite works at the cellular level and it has no taste or odor and it can be taken on an empty stomach.

What do Heavy Metals do In Your Body?

Let's talk for a moment just about heavy metals. You would be shocked if you realized how many times just in one day you are exposed to them. So what are the consequences of heavy metal toxicity?

Psychiatric Disturbances:

Social Deficits, Social withdrawal

Mercury

Repetitive, perseverative, stereotyped behaviors; OCD-typical behaviors

Mercury

Depression, mood swings, flat affect; impaired facial recognition

Arsenic, Copper, Lead, Mercury

Schizoid tendencies; hallucinations; delirium

Mercury

Irritability, aggressive behaviors, temper tantrums

Lead, Mercury

Suicidal Behaviors

Copper, Mercury

Sleep difficulties/ disturbances

Lead, Mercury, Thallium

Chronic fatigue (CFS); weakness, malaise

Aluminum, Arsenic, Cadmium, Copper, Lead, Mercury, Thallium

Anorexia; symptoms reflecting eating disorders, loss of appetite/weight

Arsenic, Lead, Mercury

Anxiety; nervous tendencies

Thallium

Attentional problems (ADHD), lacks eye contact, impaired visual fixation

Lead, Mercury

Speech and Language Deficits:

Speech disorders

Aluminum, Mercury

Loss of speech, developmental problems with language

Mercury

Speech comprehension deficits

Mercury

Dysarthria; articulation problems; slurred speech, unintelligible speech

Mercury

Cognitive Impairments:

Mental retardation, borderline intelligence

Arsenic, Lead, Mercury

Uneven performance on IQ scores, low IQ scores

Copper, Lead

Poor concentration, attention deficits (ADHD), response inhibition

Aluminum, Lead

Poor memory (short term, verbal, and auditory)

Aluminum, Lead

Difficulties understanding abstract ideas; difficulty carrying out complex commands

X Metals

Dementia; pre-senile and senile dementia

Aluminum

Stupor

Aluminum, Arsenic

Impaired reaction time; lower performance on timed tests

Lead

Sensory Abnormalities:

Abnormal Sensations in the mouth and extremities

Arsenic

Hearing loss, difficulty hearing

Arsenic, Lead, Mercury

Abnormal touch sensations; diminished touch sensations, aversion to touch

Arsenic

Blurred vision; sensitivity to light

Arsenic, Mercury

Motor Disorders:

Choreiform movements, myoclonal jerks, unusual postures

Copper, Mercury

Difficulty walking, swallowing, talking

Copper, Mercury

Flapping, circling, rocking, toe walking

Mercury

Problems with intentional movements or imitation

Mercury

Abnormal gait/posture; incoordination, loss of balance; problems sitting, lying, crawling, and walking

Mercury

Decreased locomotor activity

Aluminum, Arsenic

Convulsions; seizure

Aluminum, Arsenic, Copper, Lead, Mercury, Thallium

Physiological Impairment

Brain and Central Nervous System:

Neurofibrillary tangles

Aluminum

Neuritis, retrobulbar neuritis; neuropathy

Aluminum, Arsenic, Thallium

Encephalopathy

Aluminum, Arsenic, Lead, Thallium

Cerebrovascular disease

X Metals

Alterations in nerve conduction velocity

Lead

Alterations in the spinal chord

Thallium

Accumulates in CNS structures

Aluminum, Mercury

Abnormal EEGs

Arsenic, Lead

Autonomic disturbances

Copper, Lead, Mercury, Thallium

Peripheral Nervous System:

Peripheral neuropathy

Arsenic, Mercury

Alterations in peripheral nerves

Arsenic

Loss of feeling/ numbness in the extremities; paresthesia

Arsenic, Mercury, Thallium

Gastrointestinal Tract:

Nausea, vomiting, diarrhea; loss of appetite

Arsenic, Copper, Mercury, Thallium

Abdominal pain, stomach cramps; burning of the throat and

mouth

Arsenic, Copper, Lead, Mercury, Thallium

Esophagitis; gastroenteritis; colitis

Arsenic, Mercury, Thallium

Cancers (colon, pancreatic, stomach, or rectal)

Arsenic

Renal and Hepatic Impairment:**Hepatotoxicity; Liver dysfunction, damage**

Arsenic, Copper, Thallium

Cirrhosis of the liver; hepatitis

Copper

Kidney disease ; kidney failure

Arsenic, Lead, Mercury

Renal toxicity; tubular proteinosis

Arsenic, Copper, Lead

Kidney Damage, histological alterations

Arsenic, Lead

Cardiovascular System:**Blood vessel damage**

Arsenic

Anemia; decreased red blood cell count

Arsenic, Copper, Lead

Hypertension; increased heart rate (tachycardia)

Arsenic, Copper, Lead, Thallium

**Electrocardiac disorders, Peripheral vascular disease;
cardiovascular disease; vascular collapse**

Arsenic, Lead

Respiratory System:**Pulmonary Fibrosis**

Aluminum, Arsenic

Pneumonia, laryngitis, pharyngitis, bronchitis

Aluminum, Arsenic, Mercury

**Restrictive airway disorders, asthmatic conditions,
pneumoconiosis**

Arsenic, Aluminum

Respiratory tract cancers

Arsenic

Nasal ulcers, perforation of the nasal septum

X Metals

Immune System**Increased incidences of asthma, autoimmune-like symptoms, allergies & inhibition of lymphocytes, T-cells, monocytes**

X metals

Immunosuppression

Lead

Decreased white blood cell count

Arsenic, Thallium

Reproductive System:**Genital abnormalities**

Aluminum, Thallium

Disturbances in menstrual cycle; menstrual pains

Copper, Mercury

Birth defects; premature births; Spontaneous abortion

Arsenic, Lead, Mercury

Reproductive dysfunction

Arsenic, Aluminum, Cadmium, Lead

Other Physical Disturbances:**Hypotonia or hypertonia; decreased muscular strength**

X Metals

Rashes, contact dermatitis, eczema, itchy/irritating skin

Aluminum, Arsenic, Copper, Mercury

Muscle pain; headache; acrodynia; colic

Arsenic, Copper, Lead, Thallium

Alopecia (hair loss)

Thallium

PHEW! Are you still with me???

Every day there is another news story about toxins in our environment and our exposure to them. Toys are recalled because of lead, baby bottles are recalled because they leach toxins into the milk, people who live healthy lives have been tested with an incredible number of toxins in their bloodstream. One study showed that many people still have levels of DDT in their blood, a substance that was banned many years ago.

Another study of new born babies showed nearly 300 different chemicals in the umbilical cord blood! The umbilical cord is a baby's lifeline, bringing nourishment from the mother and removing waste. The amniotic fluid bathes the growing embryo, and the umbilical cord brings the embryo oxygen, nutrients—and a startling array of toxic industrial chemicals, according to a recent study, "Body Burden: The Pollution in Newborns."

In a first-of-its-kind study, researchers from two major laboratories looked for the presence of toxic chemicals in umbilical cord blood of 10 newborn babies born in U.S. hospitals in August and September 2004. collaboration of the Environmental Working Group and Commonweal brought about the study. (<http://archive.ewg.org/reports/bodyburden2/>)

Of the more than 400 chemicals tested for, 287 were detected in umbilical cord blood. Of these, 180 cause cancer in humans or animals, 217 are toxic to the brain or nervous system, and 208 cause birth defects or abnormal development in animals. Scientists refer to the presence of such toxins in the newborn as "body burden." According to the studies authors, the scope of testing was limited because chemical companies are not required to divulge methods for detecting the presence of their chemicals in the human body. "Had we tested for a broader array of chemicals," they wrote, "we would almost certainly have detected far more than 287."

Who needs to take liquid zeolite?

Everyone is exposed to heavy metal toxins on a daily basis in the air they breathe, the food they eat and the water they drink. In order to remove these toxins and maintain a clean and healthy body, everyone should take Original Liquid Zeolite on a daily basis. It is recommended for persons 18 years of age or older. People under the age of 18, pregnant women and children should consult their physicians prior to use.

What Does Liquid Zeolite Cure?

Liquid zeolite does not cure anything, nor is intended to treat anything. It simply removes toxins and metals. I think it is amazing what happens when you remove metals and chemicals from the body and allow the immune system to take over and do what it was meant to do.

Liquid Zeolite and Cancer

If you search for Zeolite and cancer on the internet, you are going to find a number of different websites with a number of different claims. Zeolite cures cancer, many of them say. First of all, zeolite doesn't cure anything. Zeolite only removes heavy metals and toxins.

Liquid Zeolite is not intended to treat cancer. It does remove heavy metals and toxins from the body. Some websites (including Dr. Gabriel Cousens) claims that the zeolite appears to activate a gene which kills cancer cells. That has not ever been positively confirmed, and so can not make any claim.

However, many people taking The Original Liquid Zeolite product have improved. We believe that when you remove heavy metals and toxins

If you want to read some testimonials regarding zeolite and cancer, you can visit <http://www.testimonyinfo.com> These testimonials were all called in to a testimonial hotline and transcribed by a friend of mine, so I know they are a true experiences as told by the people who had them.

For more info on cancer, I have written an ebook called Cancer Can Be Beaten which you can get by visiting www.CancerCanBeBeaten.com

Liquid Zeolite and Other Uses

As already mentioned, I believe that anybody and everybody should be taking liquid zeolite to remove the toxins we carry in our bodies, but of course there are always going to be people who NOTICE the most benefit.

People call me all the time and the call goes something like this...

"I have ****insert illness name****. Do you think liquid zeolite will help me? My answer is always the same. It doesn't matter what you are dealing with from a health perspective. Liquid zeolite removes heavy metals and toxins.

Can it help you? It is amazing what happens when you remove the toxic sludge that is circulating in your body. Once the burden on the immune system is relieved, the body has an environment in which it can heal. Your body is MEANT to heal itself, and if it isn't bogged down then it often WILL heal itself.

Here is what I know. The Original Liquid Zeolite, when it is ingested, is made up of cleaned and activated zeolite cages. Zeolite absorbs heavy metals and toxins. Zeolite is excreted taking the heavy metals and toxins with them.

How Much Zeolite Should You Take?

It is appropriate for me to mention at this time (once again) that this book is for information purposes only, and should not be construed as medical advice. You are responsible for decisions made regarding your health. If you are uncertain, you should consult with a health care professional who is familiar with your case.

**This recommendation is for the Original Liquid Zeolite only.
The is the recommendation according to Rik Deitsch.**

Healthy, just want to detox: 10 drops 3x a day (detox) for 4 weeks or so is what people take, then 3 drops 3X a day for maintenance. Every 6 months or so, I do another detox because exposure, in the environment I live in is a given.

People with significant compromise have taken up to 15 drops 4X a day satisfactorily, **for as long as necessary** and desired.

Side Effects and Contra-indications:

The only side effect that I am aware of when taking liquid zeolite is dehydration, which is easily remedied by drinking lots of fluids. Liquid zeolite does not interact with any medications except those derived from metals (that we know of). If you are taking Lithium (often prescribed for manic depressive illness) then the zeolite can potentially remove the Lithium as it is a metal. If you are taking carboplatin (a chemotherapy agent) or any other platinum based medicine then you may wish to not take the zeolite on the day before and 3 days after after your chemotherapy.

Zeolite only circulates in the body for a maximum of 7 or so hours, so keep that in mind when deciding when to take or not take your supplement. Other than those 2 specific situations, liquid zeolite appears safe, and has no reported side effects that we know of, and it has been on the market with millions of bottles sold, for 4 years+.

Zeolite for pets.

Yes even your beloved animals can have toxin related illnesses, and zeolite has been used quite safely and with wonderful results for the animals that grace our lives.

Which Zeolite Brand is the Best?

I know there are a lot of choices out there. There will be more too. That's because the **original liquid zeolite** product has shown itself to be very safe, and there are many testimonials of its efficacy circulating.

This is what the bottle of the Original Liquid Zeolite looks like. If your zeolite doesn't look like this, you have the wrong kind. You must be careful. Some products could be ineffective and some could be dangerous. Here are some things to watch for.

Zeolites, in their rawest form are created equal, but not all zeolites are created equal when they are delivered in the final product. In their natural form, zeolites do what nature intended – they soak up toxins from the environment around them. This means that raw, inactivated zeolite is largely ineffective for human use, since it is already “full” of toxins.

There are many zeolite copycats on the market that claim to be safe and effective, but ARE they?

Most of them have not been cleaned. Most liquid zeolites and almost all the powders are already filled with things like mercury and lead. The powder company claims that you get so much more zeolite per serving than the liquids and this is true. But you need to understand that they **MUST** have you take huge amounts, because they haven't properly cleaned and emptied their zeolite. **If it is already full, or nearly full, it can't pick up much more! Powdered zeolite products are much less effective.**

Are you wondering why those powder guys, or other liquid zeolite people don't just clean the zeolite? Well it isn't that easy to do. So rather than learn

how, and spend the money to develop a clean safe effective product, they just sell it to you more cheaply and tell you to take more.

Without the highly intensive cleaning process **–they can charge less money because they deliver less of a product** and in many cases, they deliver a non-effective product.

Once the toxins and poisons are removed it is called 'activated' because it is now empty and ready to suck up all the toxins and metals from your body!

Here are the things I look for in a zeolite product when I am asked to look at another product.

→ **Activated-** Remember earlier in this report, I told you how zeolites are mined, and because they are in the ground they have toxins in them? It is SO important that these toxins are removed before you eat them. You don't want to inadvertently swallow more of what you are trying to get rid of, and a full zeolite cage won't be able to pick up as much anyway.

The ORIGINAL zeolite goes through a cleansing process that involves very high heat and a mild acidic bath to rid the zeolite of toxins. It is then tested to make sure it is pure and clean. As far as I know **we are the only company that cleans the poisons out of the zeolite**

Why is cleaning the zeolite important? A visual...

a teaspoon of full zeolite cages will not remove as many toxins from your body as 1 molecule of a cleaned and activated cage found in the ORIGINAL liquid zeolite.

www.TheLiquidZeoliteBook.com

Pretend these two glasses represent a zeolite molecule. One is full of toxins. The other one is empty, activated and ready for business!

→ **NO Fillers-** some companies add humic or fulvic acid to their zeolite product. They only do it because they haven't figured out how to 'suspend' the zeolite in solution (make it float). The humic and/or fulvic acid helps the particles float. These acids come from rotting organic material, and are ripe for growing bacteria. So beside the fact that these versions of product do NOT clean their zeolite of poisons (which causes the particles to sink, they add something that has the potential to cause infection. Several years ago, some humic acid zeolite versions had to be removed from the marketplace because of high levels of bacteria causing liver damage. I don't think humic/fulvic acid is bad for you, if it is in a sealed bottle (not a dropper bottle with access around the rubber for microbes) and if you are told how to keep it contaminant free, (refrigeration anyone?), and if you are told that it must be used up within a month.

If there is a 2 year expiry date on your humic/fulvic zeolite concoction, then it is either heat pasteurized (killing any little nutritional benefit there may be anyways) or it is at risk for contamination.

The Original Liquid Zeolite adds pure water, and a few beneficial ions like magnesium and potassium for exchanging with the metals in your body.

→ **Enhanced Zeolite (with DHQ)**- This is the most scandalous bit of marketing EVER! He says he used to sell the original liquid but that his DHQ products “energetically” tested better. Do you know what he means by this? I had an opportunity to speak with this guy (from a cancer fighting website) and ask him. **He takes a pendulum, and holds it over the product and asks the pendulum a question. If it swings one way the answer is yes, and if it swings a different way the answer is no.**

No kidding! All of the research I have done proves that the product I trust for myself and my family is the liquid zeolite original product. I have spoken to scientists and manufacturers, and people who have used the products. This guy claims his product is better because he puts a piece of glass on a string and holds it up and asks a question.

I don't mean to demean anyone who believes in this practice (called dowsing), but most people with critical thinking skills will realize that a human being can influence the swing of a pendulum. (ask a Ouija board)

Liquid vs. Powder

There is a lot of information from powder zeolite distributors that is confusing to the average consumer. Some of you may have seen a report which is a “response” to the liquid zeolite companies.

This report suggests that zeolite can't be 'liquefied' and still maintain its properties. He should stop at “can't be liquified”. To suggest that it IS liquified into a pool of ingredients shows complete lack of knowledge about a zeolite particle, or 'liquid zeolite'. Let me reiterate what I said above. Zeolite can NOT be liquified. Liquid zeolite is powdered zeolite which is micronized (made very very small) and cleaned of toxins (so that it is empty, activated and ready to suck toxins out of your system).

All studies done on zeolite were done on powder. This is absolutely true. **Unactivated, unclean powder was used.** When you empty the zeolite and crush it small enough to enter the blood stream, like is done with the Original Liquid Zeolite, just imagine how much more powerful this zeolite is.

There is FAR less zeolite in liquid zeolite compared to a powdered zeolite dose. **True again... but consider why.** Remember the picture of the glasses I showed you above? A teaspoon of zeolite that is full (and not cleaned) will not be as effective as ONE zeolite cage that is activated and found in liquid zeolite. A full wheelbarrow can't hold more dirt. A full bowl can't hold more soup. A full zeolite cage can't grab more toxins. One cleaned and activated zeolite particle found in the Original Liquid Zeolite has the surface area (attraction ability) of the four walls of an average room! There is no such thing as "pristine source of zeolite", or zeolite mines "specific for human consumption".

The Original Liquid Zeolite is more expensive than other liquids and powders. The process to clean and activate the zeolite has a cost. The equipment to micronize the zeolite has a cost. The lab, the staff, the studies.. they all have a cost. I understand that some people can not afford the price of the Original Liquid Zeolite. For those people, the products that aren't cleaned and processed properly are available at a cheaper price.

Other Internet Goofiness

- One company says that their liquid zeolite product could give you a fever, and the fever could come and go. They go on to say that the fever helps kill cancer cells. I want you to apply logic to this scenario. What exactly does a fever mean? You get a fever when you have a flu or cold. You get a fever when you have an inflammation, or an infection. If your zeolite product is causing you to have a fever then it is because there is something in it that is causing inflammation or an infection, OR your body is treating it like such. **Fever does not kill cancer cells.** If it did, then anyone who got pneumonia would have their cancer cured!
- The zeolite activates the p21 gene and kills your cancer cells – **well we don't know this for sure.** There was one study done in animals, that indicated a suppression of tumor growth, and tumor death, and the researchers hypothesized that the zeolite may, in some way, activated the p21 gene, but it is by no means certain. **Zeolite does NOT cure cancer!**
- Enhanced zeolite is better. Be very careful with this one. Enhanced zeolite is a humic acid version. It is 'untested' as far as I know, and the people promoting it use the "pendulum on a string" method of testing, have

no credentials on their site, no product safety tests available, no contact information.... we don't even know who wrote the report that says that enhanced zeolite will cause cancer cells to "burst". I know many people want to believe that, but there is no reason to believe any of that.

- Zeolite works better on cancer cells when it is full? Zeolite does not "work" on cancer cells at all. Zeolite removes heavy metals and toxins. Yes people who have cancer do get better, but it sure isn't because zeolites full of mercury cause cancer cells to disintegrate.

Conclusion

I think liquid zeolite is a fantastic product. I think that people of all ages should be taking it, whether they are currently exhibiting symptoms of toxin overload or not. In fact, I believe that everyone WILL have some form of detox product in their home in the very near future. **Only the Original Liquid Zeolite** freely makes available their lab tests showing purity. **Only the Original Liquid Zeolite** has a proprietary manufacturing process that cleans all of the poisons and impurities out of the cages, and has found a way to suspend the zeolite. This means they don't have to add humic or fulvic acids that could cause bacteria to grow.

How To Order

If you live in USA, Japan, Australia, New Zealand, Macau, Singapore, Hong Kong, Philippines or countries of the European Union **YOU WILL SAVE MONEY** if you become a distributor to get wholesale pricing.

Click here for ordering instructions

<http://www.theliquidzeolitebook.com/leave.html>

If you live anywhere else in the world, I am sorry we are unable to help you at this time as our supplier only ships to the countries listed above.

If you wish to place an order by phone, you can call me
506-357-0099

A note about buying wholesale.

If you live in the countries noted above, I ALWAYS recommend that you become a distributor. EVEN if you decide not to sell, but simply use it for yourself, you still get a significant discount by ordering as a distributor. It is only \$29.95 one time fee to be able to buy wholesale for a full year. This is well worth it.

You will notice that I haven't mentioned the name of the product.

This book is not company produced, it is published by me independently. When you order it pack, this is what it looks like.

(the company label is blocked out of my picture)

Order Original Liquid Zeolite

3 bottles for \$130 with membership (reg \$155)

6 bottles for \$260 with membership (reg \$290)

18 bottles for \$650 with membership (reg \$775)

Are you looking for a supplemental income?

There are people just like you that are looking for these products and don't know where to get them. There are many thousands more who need to hear about these products, but no one has told them yet. **We need help** spreading the word about the Original Liquid Zeolite, and the other quality products in our line. You see, this company is only just gathering steam, and already YOU have heard about the products. How often does it happen that people are looking for something they feel they HAVE to have for themselves or a loved one, and have to go to the internet just to find it? You have the opportunity now to help those people get what they want, making a difference in their lives, impacting their health, and at the same time earn a 'from home' income that could pay an extra bill OR retire you from that corporate job.

As a distributor, you don't have any quotas or inventory, and you get to work at your own pace around your other activities. In fact most people who run a successful distributorship are only working 5 to 15 hours or so a week. With the economy on a downslide the way it has been, many people are looking for a way to bring in some extra income, or indeed are looking for a new career. **If that is you, contact me.** There are more people looking for these products, all over the world, than I can help on my own.

Wishing you peace, health and prosperity,
Shelley Penney
